EXPERIMENT -10

Internetworking with router in Cisco packet tracker simulator.

AIM: To design and configure a simple internetwork using a router and establish communication.

Requirement:

Cisco packet tracer

1 Router

2 PCs

Copper straight through cables.

Theory:

A router is a networking device used to connect different network and forward packet b/w them in two PCs.

IP configuration:

Device	IP address	Subnet mask	Gateway
Router Fa0	192.168.10.1	255.255.255.0	-
Router Fa0/1	192.168.20.1	255.255.255.0	-
Pc0	192.168.10.2	255.255.255.0	192.168.10.1
Pc1	192.168.20.2	255.255.255.0	192.168.20.1

Procedure:

1. Open cisco packet tracker
2. Place one router and 2 PCs in workshop
3. Connect PC0 to Router 1 - fast ethernet. o/o using copper straight through cable
4. Configure PC0:

   IP: 192.168.10.2

   Subnet mask: 255.255.255.0

   Default gateway: 192.168.10.1

5. Open command prompt PC0 and type ping 192.168.20.2
6. Observe the replies packet.

RESULT: Thus the network (inter) was succesfully designed and configured.
