EXPERIMENT - 12

End to End communication at Transport layer.

Aim: To implement can echo - client server using TCP / UDP socket and implement a chat client - server using socket programming.

a) echo - client - server using TCP / UDP.

A socket is an endpoint used for communication b/w 2 device.

In an echo program, the client sends a message to server and the server sends the same message back to client.

PROCEDURE:

1. Create server prosram and client program
2. Import the required socket library
3. In server, creater a socket and And it to an IP address
4. Make the server listen to client request
5. Enter msg from client.

6. The server reviews the msg and sends same msg back.

b) client server using socket program:

1. generate server and client program using socket programming.
2. Make server wait for client connection.
3. start client and connect it to server.
4. Send to server → message
5. The server sends a reply back to client.

RESULT: The end to end communication was successfully implemented using TCP / UDP sockets.
