EXPERIMENT - 3

STUDY OF NETWORK CABLES

AIM: Understood and study of different types of network cables

DESCRIPTION:

This experiment was conducted to study the construction and use of straight through and cross over twisted pair cables.

The color coding standards were followed to prepare the cables using RJ45 connectors and a crimping tool

The prepared cables were tested to verify proper network connectivity

i) **Difference b/w cross cable and straight cable**

Straight cable: used to connect different devices

eg: Pc to switch / Router

Cross cable: Used to connect similar devices

eg: Pc to Pc.

2) The type of cable is used to connect two PCs are cross cable. the cross cable is commonly used to connect PC to PC,

3) Type of cable used to connect a router / switch to your PC

4) The category of twisted pair cable in the lab to connect the PC to CAT 6 UTP - category

5) learned to arrange wires in the correct TS 68A / T568B color sequence and crime the RJ45 connector

6) The cable was successfully prepared and network connectivity was succesful.

RESULT: The straight & crossover cables were successfully prepared and tested.
