EXPERIMENT: 8

NMAP to Discover live Hosts using nmaps scans

Aim:

To discover live hosts on a network using nmap host -discovery scans - ARP scan . ICMP scan and to understand which protocol operates at which layer of TCP/IP model

Nmap:

Nmap is a free open-source network scanning tool created by Gorden Lyon

Procedure:

1) Log into TryHackme and open the Nmap live Host discovery room
2) Work through tasks 1-3 and answer the simulator based question
3) Deploy the Lab network in Task 4 and Attackerbox note target subnet
4) Run in ARP scan, PR <Subnet>/24 and record how many host respond
5) Run ICMP timestamp and ICMP address

6) Run TCN SYN (PS) TCP ACK, UDP Scan

7) Optionally capture the scan traffic using tcpdump or wireshark on the interface

8) Complete the knowledge check que and proceed to nmap base port scan room.

RESULT:

Thus Nmap host discovery scan were performed successfully using TRP, SYN, FCP, ACK VPD using ping techniques.
